

Scenario

In this scenario, you have to find more information about commands that you need to use. You also need to discover which command to use to perform a certain task.

Here's how you'll do this task: **First**, you'll explore a few commands you can use in the shell to learn more about other commands. **Next**, you'll find an option you need to add to a command. **Third**, you'll use a command to get a brief description of commands so you can identify their differences. **Finally**, you'll identify the command you need to perform a task.
