Professional Statement

My name is Willie Conway. I am enthusiastic, passionate, and driven about cybersecurity, information security, computer networking, and enjoy creating, programming, and contributing to solutions that can positively impact an organization and the people it serves. I am a highly motivated individual with a solid background in computer science and and information sciences. I am intrested in pursuing a career in cybersecurity because of the ever-growing need for professionals who can protect our digital infrastructure.

While focusing on information and computer sciences, I noticed that my strongest subjects were math and science. I have experience working with computers and I'm comfortable learning different networking protocols, programming languages and security tools. My education and tactical experience from serving in the military allowed me to develop analytical and great technical capabilities in leadership, critical thinking and problem solving to enable me to find solutions quickly, when dealing with complexity. I enjoy creating projects and spreadsheets to manage and organize everyday tasks, as it is the challenge that provides opportunity to use my skills while safeguarding our country.

I am interested in cybersecurity for the challenges it presents. The nature of a constant evolving field of technology and threats makes cybersecurity itself exciting, as you never know what to expect. I enjoy helping others and am interested in this security field but have no prior experience. I want to obtain a entry-level cybersecurity position that will optimize my drive and thrive for knowledge. I believe the Google Cybersecurity Certificate has helped me become a better candidate as it helped me develop foundational and professional skills that I've lacked. Moreover, I enjoy working with teams, peers and independently if required. In Overall, I believe that my interests, skill set, drive and background makes me a great fit for a career in cybersecurity.
