# Professional Statement

I go by the name Willie Conway. I have a lot of energy, passion, and drive for cybersecurity. I adore developing, coding, and adding to solutions that can benefit a company and the clients it serves. I have a strong foundation in computer science and information sciences, and I'm a highly motivated individual. Due to the increasing demand for individuals who can safeguard our digital infrastructure, I am considering a career in cybersecurity.

I've worked with computers before, and I feel confident picking up new networking protocols, coding languages, and security technologies. My education and military training helped me build analytical and excellent technical leadership, critical thinking, and problem-solving skills that have helped me discover solutions fast when dealing with complexity.

The difficulties that cybersecurity offers are what pique my curiosity. Cybersecurity is thrilling since it is an area that is always developing in terms of risks and technology. Despite my lack of expertise, I appreciate being of service to others and am interested in the security industry. I'm looking for an entry-level cybersecurity job that will support my curiosity and ambition. Being able to acquire basic and professional abilities that I had previously lacked has made me a better candidate, in my opinion, according to the Google Cybersecurity Certificate. In addition, I like working in groups, with peers, and on my own when necessary. Overall, I think I'd be a wonderful fit for a job in cybersecurity given my interests, skill set, desire, and history.
